

## **Is your Fire Protection Equipment Ready for a Fire??**

Your fire protection system is like an insurance policy. You hope you never need it. But when you do, you want it to be there. While your fire protection system shares that quality with your insurance policy, it is different in other ways.

Your insurance policy does not need periodic maintenance or inspection. Your fire protection equipment does.

A National Association of Fire Equipment Distributors survey found that hand operated fire extinguishers put out over 90% of the fires in commercial facilities before the fire department arrived. And they can put out fires before the sprinkler system sprays water all over your facility. This what happens when your fire extinguishers are regularly inspected and maintained. If you don't inspect and maintain your fire protection equipment or have someone do it for you, you may be unpleasantly and expensively surprised.

Non-residential fires cost US industry an average of \$2.7 Billion \$ each year since 1998. And this is just the direct damage due to the fire. It does not include the cost of lost production, medical costs, or law suits. You don't want to be included in those statistics.

But you say your job is the production of the goods and services that your customers need. That's where your profits come from. You do not make any money from your fire protection system. But you know that you need a reliable and adequate fire protection system. You may feel you can't afford to devote production manpower to its inspection and maintenance. So what do you do? Wouldn't it be great to have manpower to inspect and maintain your fire protection system that you have to pay only when they work?

That's where we come in. Fire-Ready can inspect your fire protection system, recommend corrective actions and provide a detailed report of your fire protection assets. Our services and reporting system allow you to be code compliant without impacting your production. We also provide a Lifetime Labor warranty. And if we do not provide an inspection report within 24 hours of the inspection, the inspection is FREE. Not a bad deal!

Not sure if your fire protection system is ready for a fire?

Call Fire-Ready at 1-866-xxx-yyyy and you will be sure!
